

Protect what you value.

McAfee SECURE for Web Sites

Help protect your network perimeter with the most comprehensive managed scanning service.

KEY ADVANTAGES

- **Daily scans check for latest web application and network perimeter vulnerabilities**
- **Ongoing web crawling searches for adware, spyware, popups, spam, and browser exploits**
- **With this online service, there's no hardware or software to deploy, install, or maintain**
- **Receive unlimited technical and PCI DSS compliance support**
- **Enjoy all the benefits of McAfee PCI Certification Service**
- **Get McAfee Technical Assist: unlimited technical and compliance support when you need it**

Network perimeter and web site breaches are increasingly frequent and can lead to devastating consequences—loss of customer trust, decreased revenue, downtime, and legal repercussions. In fact, 80 percent of web sites are vulnerable to hackers. McAfee SECURE™ for Web Sites service combines daily network perimeter scanning and ongoing web crawling, so that you have the latest information on your vulnerability risk profiles, including the presence of dangerous web application vulnerabilities. It also establishes consumer trust and helps you become certified to the Payment Card Industry (PCI) Data Security Standard.

The world's network perimeter security standard

McAfee SECURE helps you prioritize your IT security projects, demonstrate return on investment (ROI), and prevent data breaches. By giving you continual insight into your network perimeter's security status, it helps you protect your network perimeter and web site from potential vulnerabilities and hacking attempts

Benchmark your real-time security status against McAfee SECURE—a recognized third-party security standard created by the world's largest dedicated security company.

A safer online experience for surfers, searchers, and shoppers

McAfee SECURE is an easy-to-use service that helps protect your network perimeter, your organization, your brand, and your customers from hackers, data breaches, adware and spyware infections, popups, browser exploits, and phishing attempts. We've combined our widely used vulnerability scanning technology that currently protects more than 80,000 web sites with continuous technology that browses sites, downloads files, and tests signup forms to uncover malicious activity and identify sites that are knowingly or unwittingly enabling cybercrime.

Easy startup. No hardware or software to install, deploy or maintain

McAfee SECURE for Web Sites is completely web-based. The highly customizable and interactive vulnerability management portal requires no installation, no setup, no hardware purchases, no software development, no security expertise, and no special training to use. We monitor your security profile and vulnerabilities 24/7 to help ensure that your network perimeter and web sites are protected around the clock.

SYSTEM REQUIREMENTS

There are no system requirements for the McAfee SECURE for Web Sites service.

Protect your entire infrastructure

- Scan all Internet services, shopping carts, ports, operating systems, servers, key applications, firewalls, addressable, switches, load balancers and routers for all known vulnerabilities and social engineering risks such as spyware, spam, viruses and online scams—every single day

Safe and easy-to-use

- It's remote subscription-based service that requires no additional hardware or software investment or maintenance
- Vulnerability scanning that is non-invasive
- McAfee SECURE certification reassures your web site visitors that their personal information will be safe

Vulnerability management portal

- The portal provides a comprehensive and easy-to-use suite of interactive network security management tools

Track system configuration

- Identify unauthorized server applications and track system configuration changes

Detailed reporting

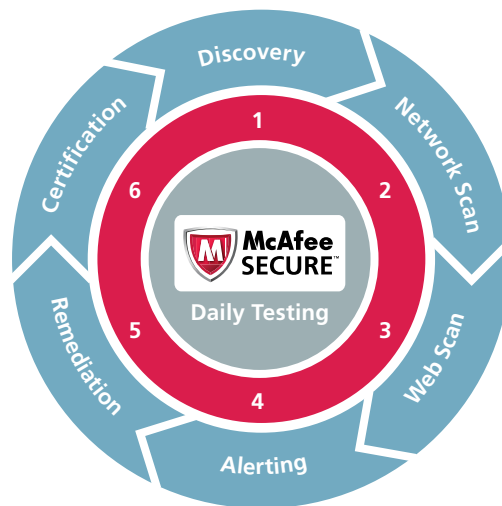

- Concise reports provide specific recommendations for remediation
- Reports results of more than 10,000 individual vulnerability tests plus port scans

Continuous 24/7 coverage

- Seamless protection by virtue of continuous comparisons between scans of your most recent system configuration against new threats.

Always up to date

- Vulnerability data is collected and updated on-the-fly from hundreds of sources worldwide
